

125 SERIES

PCB MOUNTING LED

FEATURES

- 5mm Right Angle PCB
- Diffused LED
- Standard Intensity LED
- Leads pre-cropped 3mm
- Mounting Spigot
- Range of LED colours
- Conforms to UL94 V-0 Flammability Rating

BENEFITS

- Saves on board space
- Diffused LED gives wide viewing angle
- Reduced power consumption
- Saves on assembly time
- Secure anchor to PCB
- Suitable for a wide range of PCB applications
- Meets industrial requirements
- Outstanding reliability

MARL Part Number	LED Colour	Typical LED Voltage DC Vf	Typical LED Current DC If	Typical LED Luminous Intensity	Typical LED Wavelength λ_p	Operating Temp Topr *	Storage Temp Tstg

TECHNICAL DRAWING

Weight (g): 0.7

Dimensions in mm (typical). Not to scale.

NOTES

Intensities (lv) may vary between LEDs within a batch. Figures for Bi-Colour LEDs and multi-LED products are per LED and denoted respectively. Additional LED Colours, LED Colour Combinations, Voltage Options and Reverse Polarity options available for semi-custom projects. Please contact our Sales Team. All LED components are supplied in anti-static packaging.

* LED Characteristics stated at Ta=25°C. For operating temperature derating graphs, please refer to sheet 2.

125 SERIES

PCB MOUNTING LED

HOUSING MATERIAL

Nylon6,6 PA66 FR(30)

This material offers UL94 V-0 flame retardancy. This material has a melting point of 263°C and is suitable for use in the majority of automatic soldering processes.

DE-RATING GRAPHS

DESIGN CONSIDERATIONS

LED Polarity

Anode identification is shown in the dimensional diagram.

Electro-Static Discharge (ESD)

Build up of electro-static discharge occurs in many situations involving people moving and handling products. The range of possible situations is very diverse but voltage levels as high as several thousand volts can and do arise in many individual situations. When an operator charged up to these levels handles a static sensitive device, there is a very probable likelihood that the device will be irreversibly damaged. It is essential that precautions are

taken at all stages during manufacture and assembly of these products. Although LEDs were never considered to be static sensitive devices, changes in manufacturing technology and materials used to produce higher intensity products over a large range of the wavelength spectrum have changed this. MARL has an approved system of ESD control from goods in, through production and into final packing and despatch. MARL recommend all users of LED based products follow the current BSI guidelines for protection of electronic devices from electrostatic phenomena.

Voltage, Current and Temperature

The forward voltage / current value of an LED is dependent upon the ambient temperature of the environment in which it is operated. Therefore, care must be taken to operate the LED at the correct voltage / current values, depending upon the ambient temperature.

MARL should be contacted if the device is to be operated outside the temperature range specified. MARL accept no liability for any product that is operated outside the stated voltage or temperature range.

To order please contact us on +44 (0) 1229 582 430
